**NOTE:** Any manual entries shown on this report are supported by the Manual Entry log (EL68).

### Auditor’s Comments:
- Total number of iVotronic ballots cast containing no votes: 3
- The following precincts have no ballots cast in them: Emergency, Failsafe, Provisional
- This audit is complete and has no exceptions.

Note: The ballot count in the Post Cert audit is three less than in the Pre Cert Audit. Also there are 3 more ballots in the EL152 data than either the EL155 or the EL30A. Upon checking with the county about this they responded: "We had 2 machines set up for Senate 45 for Absentee and 3 persons application #115; 116 and 117 voted and it wasn’t caught until after the voters voted that they did not live in District 45. We at the time had 3 different elections going on: Absentee and my assistant didn’t realize the applications that printed were for another election and not the Senate 45 election. So I challenged the votes." This explains the discrepancy.
Jasper Ballot Audit Report

EL30A iVo to EL155 to EL152 Cross Check and Cancelled Ballots.

| EL30A iVo Ballots | EL155 Ballots | EL152 Ballots |
|-------------------|----------------+---------------|
| Delta from EL30A  | 0              | 3             |
| Delta from EL155  |                | 3             |
| Cast By Voter     | 2014           | 2015          |
| Cast By Poll Wkr  | 2              | 0             |
| Blank Cast by PW  |                | 0             |
| Cancelled Ballots | 11             |               |
| Wrong Ballot      | 1              |               |
| Voter Left AB     | 0              | (AB = After ballot selected by poll worker.) |
| Voter Left BB     | 0              | (BB = Before ballot selected by poll worker.) |
| Voter Request     | 1              |               |
| Printer Problem   | 0              |               |
| Terminal Problem  | 4              |               |
| Other Reason      | 5              |

Number of audio (ADA) events in this election: 0

How to read this report.

This is the ballot level report. It compares the number of ballots cast in the tabulation report, the EL30A with the number of ballots cast in the audit data.

The values read from the EL30A report are reported in four categories; Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated but parsed from the actual report. The total lines are the calculated sum of the individual precinct line values.

The Opt totals are the total number of ballots cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M400 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots.
Jasper Ballot Audit Report

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.

The values on the Audit side come from the iVotronic audit data that is read from the flash cards as part of the audit process. That process combines the individual machine data into two master audit files, the EL155 Vote image log and the EL152 iVotronic event log.

The EL155 contains a record of all the votes cast on a ballot. The vote images indicate the machine counting the number of asterisks in a precinct we get the number of ballots cast in that precinct. That number should always match the number in the iVo column on the EL30A side of the report.

Optical ballots do not have electronically readable audit files. So if the audit data iVotronic total does not match the EL30A Total value, the auditor is prompted to read the paper report from the optical scanner and enter the total ballots cast into the auditing program.

If the sum of the audit iVotronic and Optical ballots cast still do not match the EL30A total value, then the audit software reads the EL68 Manual Entry log for any changes made in that precinct to either the iVo or Opt totals by the CEC staff. It displays any manual entries to the auditor for inclusion into the totals.

If accepted by the auditor these entries are automatically added to the Man column from the Manual Entry log.

Finally, the audit software calculates the Delta value which should be zero unless the sum of the iVo, the Opt and the Man do not match the EL30A Total column. If the Delta is greater than zero then audit data is missing. A comment will be placed on that line in the report indicating missing audit data. If the Delta value is less than zero then there are more ballots in the audit data than there are in the tabulated data and a comment will be placed on that line in the report.

Wherever possible, the audit system will attempt to indicate where the difference is by displaying the iVotronic machine numbers and the number of ballots cast on that machine that exist in the audit data.

In the case of missing tabulated data, it might be possible to identify a machine that has the same number of ballots cast as the Delta value and that number and ballot count will be highlighted with a < sign. If there is a non-zero Delta value there will be an entry by the auditor explaining the variance.

Finally, there is a EL30A iVo to EL155 to EL152 Cross Check and Cancelled Ballots table in the report.

This table should indicate that the number ballots cast in the EL30A match the numbers in the EL155 and the EL152 report. Then there are some statistics pulled from the EL152 report that indicate how many ballots were cast by the voter and the number cast by the poll worker. Lastly the number of ballots that were cancelled and the reason they were cancelled. It should be noted that the reason cancelled is chosen from a pull down menu presented to the poll worker when a ballot is cancelled, there is no way to validate the poll worker's choice.

Page 6
Here is the vote level report. It compares the number of votes cast for each candidate in the tabulation report with the number of ballots cast in the audit data for each candidate in each precinct.

The tabulated values as read from the EL30A report are reported in four categories; Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated, but parsed from the actual report. In the EL30A report all Write-in votes are added together and reported as one candidate name - Write-in. The EL30A does not report individual Write-in candidates.

The Opt totals are the total number of votes cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M100 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots cast for transmission to the tabulation system.

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.

The values on the Audit side come from the iVotronic audit data that is read from the flash cards as part of the audit process. That process combines the individual machine data into a master audit file, the EL155 Vote image log.

The EL155 contains a record of all the votes cast on a ballot. The vote images indicate the machine Ocounting the number of times a candidate name for a contest appears in a precinct we get the number of votes cast in that precinct for that candidate. That number should always match the number of votes cast for that candidate in that contest in the iVo column on the EL30A side of the report.

Optical ballots do not have electronically readable audit files. So if the audit data iVotronic total votes
Jasper Vote Audit

does not match the EL30A iVo value one of two things will occur. The first is if the iVotronic tabulated
is zero and the Total tabulated votes match the tabulated Optical votes the following comment is made in
the Audit side of the report: All votes cast for this candidate in this precinct are optical No Audit
Data for optical, or secondly, if the iVotronic total is not zero, a notation indicating which data Audit data
In the event a candidate or the combined Write-in candidates did not receive any votes in a precinct
the EL30A will report a zero vote count. If there are no votes for this candidate in a precinct in the audit data,
the following comment will be placed into the audit report by the auditing software; No Audit Data expected or
found.

Finally the audit software will search the audit data for any votes that were not found on the EL30A report.
If it finds some, it will report those vote totals by contest, candidate name and precinct. if it does not
find any unmatched audit data it will report; There was no unmatched audit data

How to read this report.

This is EL30A EL45A Crosscheck Report. It sums each candidate's vote totals in each precinct in the EL30A Precinct Detail Report and compares it to the EL45A Election Summary Report that contains the tabulated total for each candidate in the county.

The values read from the EL30A report are reported in four categories: Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated but parsed from the actual report. The total lines are the calculated sums of the individual precinct line values.

The Opt totals are the total number of votes cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M400 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots cast for transmission to the tabulation system.

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.
The values read from the EL45A report are reported in same four categories; Total, Optical (Opt), iVotronic (iVo) and Flash as the EL30A. Like the EL30A they are parsed from the actual EL45A report. The summary candidate totals are compared against the calculated sums for each candidate from the EL30A report. Each of the values in each line on the EL30A side must match the same value on the EL45A side and the Delta value must be zero.

**How to read this report.**

This is the PEB Exceptions Report. It checks for the following conditions in the iVotronic Event log:

1. A machine that was opened and closed by different PEBs  
2. A machine that was not opened on Election Date - could be either an absentee or test machine  
3. A machine that was not closed on Election Date - could have had problems closing  
4. A machine that was not opened by 7 am - note most Absentee machines will show up here  
5. A machine that was closed before 7pm - polls close at 7 PM  
6. A machine that was not closed ever.  
7. A machine that has no ballots cast on it.

Each of the events above detected are reported on a separate line, each line contains the following information: iVotronic machine number, Opening PEB Number, Open Time, Closing PEB Number, Closing Time, the Exception Type and the Precinct and the Ballots Cast on that machine.

Absentee and FailSafe precinct machines are opened during the middle of the day several days before the election date of 09/01/2015. So it is normal for these machines to appear on this report with Open Date and Open Time exceptions.

14 precincts processed

The following precinct(s) have no ballots cast in them: Emergency, Failsafe, Provisional  
Note: if there are no ballots cast in a precinct the machines in that precinct cannot be identified so these precinct(s) will not appear in this report.

**How to read this report.**

This is the PEB Used report. It lists the precincts found in the Audit data and lists all the PEBs that were used by the poll workers to open and close the iVotronic machines in that precinct.

If more than one PEB is used to open and close all the iVotronic machines in a precinct, then the County Election Commission must read ALL the PEBs used in that precinct to assure that they have collected all the ballots from that precinct. A county whose report shows a precinct that has machines open or closed by more than one PEB should double check the Ballot Audit Report against the iVotronic paper tapes and the Poll Book to make sure that all the ballots have been collected and tabulated.
Audit File Descriptions

The audit file package for each election contains six files that are created by the Election Management System, Unity, which is used for elections in South Carolina. These files are used by the audit process created by the South Carolina Election Commission. Each of these text files can be read by any text editor.

The six files are the; EL45A Election Report, EL30A Precinct Report, EL155 Vote Image Log, EL152 Event Log, EL68A System Log and EL68 Manual Entry Log.

**EL45A Election Report**

The EL45A Election Report is the summary report and shows the grand totals for each contest in the election for the entire county.

Report Header

<table>
<thead>

The EL30A Election Report

The EL30A Election Report is the precinct report. It is similar to the EL45A report but it shows the totals in each precinct for each contest that was included in that precinct. These contests can vary from precinct to precinct depending on the location of the district lines in the county. It is possible that a precinct may include two or more seats in a contest but each voter in that precinct can vote for a candidate for only one district.

Each precinct is reported separately.
The last precincts in the election contain the “Virtual Precincts”: Absentee, Emergency, Failsafe, Provisional and Failsafe / Provisional. When for some reason a voter cannot cast his or her ballot on a voting machine in the precinct to which a voter is assigned, that vote is cast in one of these precincts. Examples of reasons a vote must be cast in a virtual include absentee voting and cases when a voter’s right to vote has been challenged in their assigned precinct.

<td>Date and time the report was created, name of the report and page number</td>
</tr>
<tr>
<td>Fifth line</td>
<td>Column titles</td>
</tr>
</tbody>
</table>
Audit File Descriptions

The User column is always blank and Counted Information applies only to certain events or operations contained in the log.

The first entry will always be the date and time that the database was created (loaded on to the Unity machine).

<table>
<thead>
<tr>
<th>USER DATE</th>
<th>TIME</th>
<th>SYSTEM ACTION OR ERROR INFORMATION</th>
<th>COUNTED INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>09-26</td>
<td>10:07 am</td>
<td>DATABASE CREATED</td>
<td></td>
</tr>
</tbody>
</table>

Here is an example where counted information is included in an event.

<table>
<thead>
<tr>
<th>USER DATE</th>
<th>TIME</th>
<th>SYSTEM ACTION OR ERROR INFORMATION</th>
<th>COUNTED INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>11-05</td>
<td>07:42 pm</td>
<td>PRC 0750 PACK RECEIVED VTR</td>
<td>(BALS=309 TOT=309)</td>
</tr>
<tr>
<td>11-05</td>
<td>07:42 pm</td>
<td>PRC 0850 PACK RECEIVED VTR</td>
<td></td>
</tr>
</tbody>
</table>

The auditor will refer to this log if an exception to the audit is detected by the automatic audit process or a “deeper dive” into the events of an election is required for any reason. It is not part of the automated audit process.

The EL68 Manual Entry Log

The EL68 Manual Entry Log is a record of every manual entry that occurred in the Election Management System (Unity) from the time that the election database was loaded prior to the election until the time the report was run.

Report Header

<table>
<thead>
<tr>
<th>First line</th>
<th>Indicates the report is the Manual Changes Log Listing and the county</th>
</tr>
</thead>
<tbody>
<tr>
<td>Second line</td>
<td>Name of election</td>
</tr>
<tr>
<td>Third line</td>
<td>Date of election</td>
</tr>
<tr>
<td>Fourth line</td>
<td>Date and time the report was created and the election ID</td>
</tr>
<tr>
<td>Fifth line</td>
<td>Column titles</td>
</tr>
</tbody>
</table>
Audit File Descriptions

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The User column is always blank, the GRP column indicates the Report Group in which the change was made if applicable. Group 3 is the Optical group, group 4 is the voting machine group.

<table>
<thead>
<tr>
<th>MANUAL CHANGES LOG LISTING</th>
<th>Sample County</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sample Election</td>
<td>Samplemonth 1, 2013</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PRECINCT</th>
<th>CANDIDATE</th>
<th>USER DATE</th>
<th>TIME</th>
<th>GRP</th>
<th>OLD</th>
<th>NEW</th>
</tr>
</thead>
<tbody>

<td>0</td>
<td>1,852</td>
<td></td>
<td></td>
</tr>
<tr>
<td>0102 Precinct 2</td>
<td></td>
<td>11-05 04:21 pm</td>
<td>0</td>
<td>943</td>
<td></td>
<td></td>
</tr>
<tr>
<td>0103 Precinct 3</td>
<td></td>
<td>11-05 04:21 pm</td>
<td>0</td>
<td>1,476</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If the candidate column contains the word “VOTERS” and the Old column contains a zero, this is a manual entry for the number of registered voters in the precinct. This is a normal entry performed on Election Day usually sometime between 9 AM and 7 PM. Note that in the example above the word “VOTERS” appears only in the first entry, the subsequent entries are all blank.

In the following example we can see that the same thing happens in the precinct column.

<table>
<thead>
<tr>
<th>0750 Absentee</th>
<th>BALLOTS CAST - TOTAL</th>
<th>USER DATE</th>
<th>TIME</th>
<th>GRP</th>
<th>OLD</th>

</tr>
<tr>
<td></td>
<td>04-08 10:11 am</td>
<td>4</td>
<td>22</td>
<td>10</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Care must be taken when evaluating a situation where the value was changed more than once. As you can see, manual entries were made for these candidates on 04/06 and 04/08.

On 04/06
- At 1:04 PM Candidate A group 3 (Optical) was set to 1
- And Candidate B group 4 (iVotronic) was changed from 10 to 12
Audit File Descriptions

On 04/08

- At 10:05 AM Candidate A group 3 (Optical) was set to 1
- And Candidate B group 3 (Optical) was set to 2

- At 10:08 AM Candidate B Group 4 (iVotronic) 10 votes were manually added to the 12 that were there after the 04/06 manual entry

- At 10:11 AM Candidate B Group 4 (iVotronic) 12 votes were removed, returning the count to 10.

- At 10:13 AM The Total Ballots Cast in Group 3 (Optical) was set to 3.

A review of the EL68A System log indicates that there were 10 iVotronic ballots cast in the Absentee precinct that were electronically read in at 01:02 PM on 04/06. The audit confirmed that all 10 Absentee iVotronic ballots were cast for Johnson when checking the EL30A iVotronic total versus the EL155 Vote Image File.

The EL30A report for the Absentee precinct in this election is below.

```
0750 Absentee

<table>
<thead>
<tr>
<th>TOTAL VOTES</th>
<th>% Optical Scan</th>
<th>iVotronic</th>
</tr>
</thead>
<tbody>
<tr>
<td>REGISTERED VOTERS - TOTAL</td>
<td>0</td>
<td></td>
</tr>
<tr>
<td>BALLOTS CAST - TOTAL</td>
<td>13</td>
<td>3</td>
</tr>
</tbody>
</table>
```

State House of Rep. Dist 64
Seat to Fill 1

```
Candidate A . . . . . . . . . . . 1  7.69     1  0
Candidate B . . . . . . . . . . . 12 92.31   2 10
Write-In . . . . . . . . . . . . . 0  0       0  0
Total . . . . . . . . . . . . . 13  3       3 10
```

The above example is why the SEC Audit process automatically creates an exception when it detects that a manual entry was made. The auditor must perform a manual evaluation of the events and confirm that a mistake in the vote count was not made.
Audit File Descriptions

EL155 Vote Image Log

The EL155 Vote Image Log is a record of every ballot cast on the iVotronic voting machines in the county.

Report Header

<table>
<thead>
<tr>
<th>First line</th>
<th>Second line</th>
<th>Date and time the report was created the precinct number and name and the the Election ID</th>
</tr>
</thead>
</table>

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The VOTR. column contains the serial number of the iVotronic voting machine upon which the vote was cast, the B/I column contains the Ballot Index which indicates which ballot style that appears in the precinct was used to cast that ballot (Note: the ballot index can be different in each precinct for a ballot style that is common to the precincts.

There is a number before the candidate name that is used to indicate precinct totals for each candidate in the precinct footer at the bottom of the each precinct. In this case candidate 2 is Steve Benjamin who received 37 votes in this precinct and candidate 7 is Tamekia Isaac Devine who received 33 voted in this precinct.

The office that the candidate is seeking is placed in the final column in this report. There is no header for that column.

Note the asterisk (*) in some of the records in this report. This indicates the first record in each ballot. So the ballot image for the first ballot shown in this report voted for Steve Benjamin, Tamekia Isaac Devine and Yes, in favor of the question put forward in the county resolution.

RUN DATE:11/12/13 10:16 AM                         PRECINCT  850 - Failsafe                                 ELECTION ID: 40110513
VOTR.    B/I     CANDIDATES RECEIVING A VOTE
Audit File Descriptions

Although the precinct, voting machine and the votes cast on each ballot can be determined, the order in which the ballots are cast is randomly presented in this report so neither the time of day the ballot was cast nor the voter’s identity can be discovered.
Audit File Descriptions

The EL152 Event Log

EL152 Event Log is a record of every event or operation that occurred on every iVotronic voting machine used in the election. Each machine is reported sequentially in ascending serial number order. Each event or operation on a machine is reported in chronological order.

Report Header

<table>
<thead>
<tr>
<th>First line</th>
<th>Date and time the report was created the precinct number and name and the Election ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>Second line</td>
<td>Column titles</td>
</tr>
</tbody>
</table>

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The Votronic column contains the serial number of the iVotronic voting machine on which the event occurred, the PEB# column contains the serial number of the PEB (Personal Electronic Ballot, the device that is used to open a terminal session on the voting machine to perform an operation such as allowing a voter to cast his or her ballot), the Type column contains the type of PEB being used, normally SUP.

Date and time are read from an internal clock on each machine that can be set during the set up during the machine configuration prior to each election. If this operation is not performed or performed incorrectly during set up, the time and date will be incorrect.

</tr>
</tbody>
</table>

Each event has an event code and a description of the event. The log segment shown above shows a typical set of events or operations that occur on a single machine during an election. The first message is always “0000601 Zero terminal config data” and the last is always “0001416 Copy audit data from TF 1 to CF”.

Note: there are a couple of event sequences that are created by improper insertion of the PEB into the voting machine. Usually the PEB is pulled before it has a chance to handshake properly with the voting machine. Depending on the timing of that pulling, a sequence similar to the sequences below can be generated.

Audit File Descriptions

When this happens, the poll worker waits a few seconds and tries again, waiting longer after the insertion and the voting process continues normally. Despite the alarming message “Terminal shutdown - IPS exit” this is not a critical error. It is a message that states that the terminal session initiated by the insertion of the PEB has ended.
